Please amend claim 1 as follows:

1. (amended) A method for detecting molecules expressing a selected epitope in a sample comprising:

AT (a) immobilizing a molecule expressing a selected epitope in a sample to a selected surface;

SUB C1 (b) contacting the surface with an epitope detector so that the epitope detector binds to immobilized molecules on the surface, said epitope detector comprising an oligonucleotide attached to a monoclonal antibody for the selected epitope, a single chain Fv for the epitope or a constrained epitope specific CDR, CDR mimetic or engineered CDR structure;

(c) amplifying the oligonucleotide of said epitope detector;
